

A

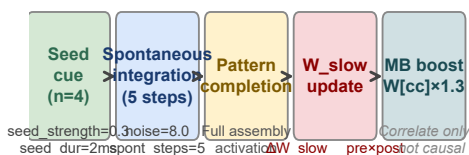

B

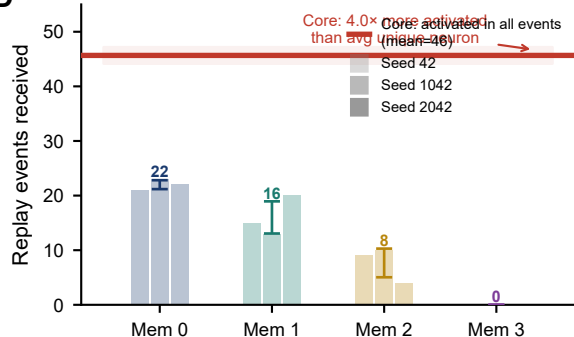

Replay event: cue → pattern completion → W_slow potentiation

~45 replay events per session • stochastic memory selection

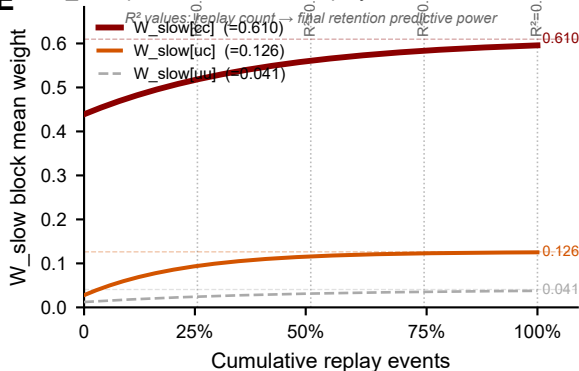

D

Schema-core replay frequency advantage (Tasks 8, 10)

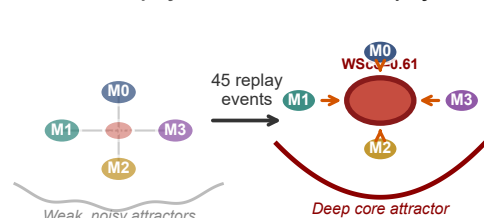

E

W_slow potentiation across replay events — block hierarchy

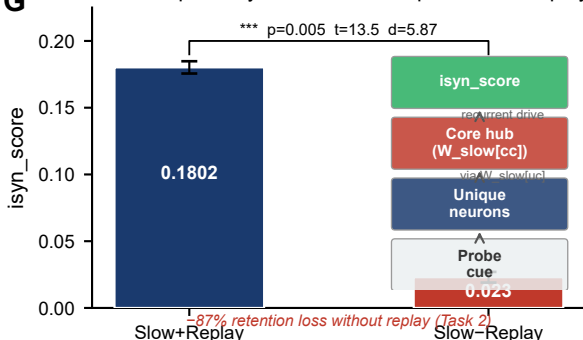

F

Attractor hub formation via W_slow[cc] recurrence

G

Retrieval pathway & retention collapse without replay

H

Causal model — solid=causal, dashed=correlate, =null
